I am an expert in information visualization, which brings together data analysis, software development, user experience research, and design. I am currently a postdoctoral researcher at Microsoft Research, where I am a member of the Extended Perception, Interaction & Cognition (EPIC) and Human Computer Interaction groups, focusing on tools for expressive information design and visualization for mobile devices.

## EXPERTISE

### VISUALIZATION AND INTERFACE DESIGN

I design, develop, and deploy visualization tools and techniques for presenting and analyzing data, typically using technologies such as D3.js or R/Shiny.

EXAMPLE PROJECTS: Timeline Storyteller, Portfolio Sandbox, SoundConsensus, ShinyFork

RELATED PUBLICATIONS: C7, J8, J6, J5, T3

### QUANTITATIVE HUMAN FACTORS RESEARCH

I design and conduct experiments as a way to understand human capabilities with respect to perception, attention, and interaction; the findings of these experiments often lead to actionable implications for interface and visualization design.

RELATED PUBLICATIONS: J8, C6, C4, T2, C3, T1

### QUALITATIVE HUMAN FACTORS RESEARCH

I evaluate existing data analysis and communication processes, work-in-progress designs, and deployed visualization tools by way of work domain analyses, interviews, chauffeured walkthroughs, and field studies.

RELATED PUBLICATIONS: J5, J2, W3, W2, TR1, T2

## APPLICATION DOMAINS

### DATA JOURNALISM AND STORYTELLING

Journalists, educators, and storytellers require expressive tools for presenting information to their audience. I have designed, developed, and promoted the use of such tools in the journalism community while considering methodologies for their evaluation.

RELATED PUBLICATIONS: C7, J7, J6, C5, J4, W5, BC1

My PhD research included case studies of journalists who used the Overview Project to investigate large text document collections. Our findings provided transferable lessons for visualizing document collections and hierarchical data.

RELATED PUBLICATION: J2

### RESOURCE MANAGEMENT AND CONSERVATION

My PhD research included the design of visualization prototypes for analyzing and monitoring energy usage in portfolios of buildings. I consulted with prospective stakeholders and users, envisioning and implementing designs for interactively locating patterns and anomalies.

RELATED PUBLICATION: J5

#### TECHNOLOGIES: CURRENT

Since joining Microsoft, I have been developing and deploying AZURE web applications using NODE.JS and EXPRESS. I use NPM and YARN for package management, WEBPACK as a build tool, and GIT for version control. I use D3.JS for visualizing data and for manipulating the DOM. My current editor of choice is VSCODE for WINDOWS. Much of my work is open source and can be found on GITHUB (username: mattbrehmer).

For creating and managing content on websites, I use Jekyll or WORDPRESS.

For creating presentations, I use REVEAL.JS, and I use LATEX for writing research papers.

For analyzing data and generating static charts, I use R and particularly the GGPLOT2 package. I also occasionally use POWER BI and TABLEAU.

#### OTHER TECHNOLOGIES

During grad school, I used the SHINY, GGPLOT2, and DATA.TABLE R packages to create analytical applications; I visualized data using D3.JS, PROCESSING, and P5.JS; and before the advent of D3, I used FLARE (the ACTIONSCRIPT port of PREFUSE), as well as the FLEX web application framework.

I produced diagrams and mockups with OMNIGRAFFLE and KEYNOTE.

Before discovering R, I analyzed data and generated charts using SPSS, NUMBERS, and EXCEL.

Prior to grad school, I developed a toolkit for active video games using C# and the XNA environment.

As a user interface design intern at EMC, I developed interfaces using FLEX (ACTIONSCRIPT) and produced wireframes and mockups using VISIO and PHOTOSHOP.

Finally, I used a variety of programming languages in undergraduate projects and assignments, including: JAVA, C++, C, HASKELL, PROLOG, LISP, and MATLAB.

## APPLICATION DOMAINS (CONT.)

#### PERSONAL HEALTH AND WELLNESS

My MSc pertained to the design and evaluation of C-TOC, a computerized cognitive assessment tool intended for early detection of dementia. I studied the use of C-TOC prototypes by healthy older adults and by adults with diagnosed mild cognitive impairments.

RELATED PUBLICATIONS: C4, J3, T2, W1

Prior to my MSc, I worked in the area of exercise video games: I studied the role of physical exertion on cognitive task performance. I also developed GAIM, a toolkit which allows players with different input devices to play active games together.

RELATED PUBLICATIONS: C2, C1, T1
